

Sante-Price Index – Android App Development using GenAI

Sante-Price Index is a modern Android application developed using Kotlin and Jetpack Compose to help users compare medicine and healthcare product prices efficiently. The application integrates Firebase Authentication and Firebase Realtime Database to provide secure login, smart product management, responsive user interface, and AI-assisted user experience enhancements.

Frontend Development

Frontend Technologies: Kotlin, Jetpack Compose, Android Studio

Frontend Features:

- Responsive User Interface
 - Login and Signup Screens
 - Dashboard Navigation
 - Product Management Screens
 - Profit Calculator Module
 - Interactive UI Components
-

Backend Development

Backend Technologies: Firebase Authentication, Firebase Realtime Database

Backend Features:

- Secure Authentication
 - Real-time Database Connectivity
 - Product Data Storage
 - Cloud Backend Integration
 - Data Synchronization
-

Features

- User Registration and Login Authentication
 - Firebase Integration
 - Product Search and Management
 - Medicine Price Comparison
 - Profit Calculation
 - Responsive Dashboard
 - Secure Data Handling
 - Modern UI Design using Jetpack Compose
-

Technologies Used

- Kotlin
 - Android Studio
 - Jetpack Compose
 - Firebase Authentication
 - Firebase Realtime Database
 - Gradle
 - Git & GitHub
-

Installation Steps

1. Install Android Studio.
 2. Clone or download the repository.
 3. Open the project in Android Studio.
 4. Configure Firebase settings.
 5. Add google-services.json file.
 6. Sync Gradle dependencies.
 7. Run the application using emulator or Android device.
-

Firestore Setup

1. Create Firestore Project.
 2. Register Android Application.
 3. Enable Firestore Authentication.
 4. Enable Firestore Realtime Database.
 5. Add Firestore configuration file.
 6. Sync Gradle files.
-

Repository Structure

```
Sante-Price-Index/  
├── app/  
├── authentication/  
├── dashboard/  
├── firestore/  
├── product/  
├── ui/  
├── utils/  
└── README.md
```

Build Readiness

The application is fully build-ready and configured to run successfully in Android Studio with proper Firestore integration and Gradle configuration.

Future Enhancements

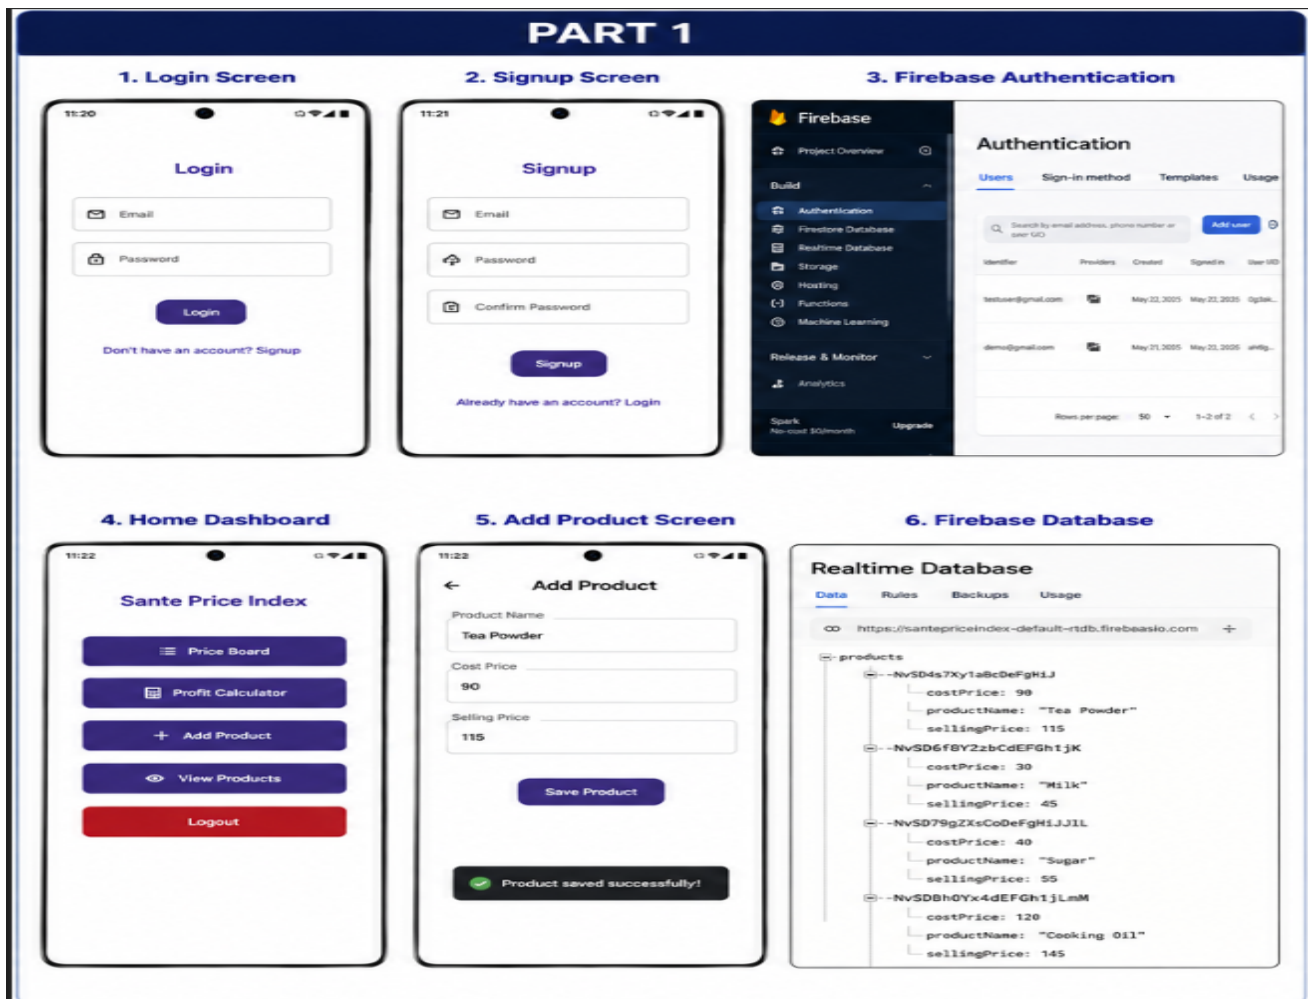

- AI-based medicine recommendation system
 - Online medicine ordering
 - Multi-language support
 - Real-time medicine availability tracking
 - Advanced analytics dashboard
-
